

Why climate change is a important issue?

It is important because if it gets warmer or colder people cannot handle it including some animals humans-can die as well as animals because if it gets to hot then polar bears won't be able to habitat in there right place when it melts the weather will get to hot polar bears won't be able to be in there on habitat. Since they are so addicted to the cold weather and if it is too hot the snow will melt and they won't be to go anywhere. So if the ice melts they won't be it there natural habitat.It gets warmer by 1.5 degrees.it could get warmer by a lot but if it gets even warmer then it will be not good for all humans.

What causes climate change ?

We have lots gas that make it warm and it is really affecting us because people are cutting down trees. The carbon dioxide is why it is so warm and the different weather like rain, thunderstorms ,heatwaves and more so we need the trees for oxygen because trees breathe in carbon dioxide and breathe out oxygen for humans for it to work we breathe out carbon dioxide and with breathe in oxygen, so we're helping trees to use it by making moving people cut trees but there aren't cut trees all though we need them for oxygen people are cutting them to build and make houses and cars out of them so we need to use electric cars. Don't waste as must paper as you would use.

Explain the impact of climate change and provide some examples

The impact on us is bad because it will get worse by getting warmer.if it gets any warmer it will be a big struggle so this means that we will have to spend more money on the correct clothes and shoe wear.We could use Less money because you are cutting down trees so less oxygen and more electricity cars and motorcycles.

A suggestion for a mitigation or adaptation action your school could get involved with and why this is important ?

It is important because if my school gets involved then it will be good because if you have lots of people it is much better for the environment it will be better if we have lots of more people joining us to help with it all.It could be a better help on the hot weather and the heatwave.You can plant some more trees and plant more flowers there are less trees so if it gets warmer it will not help trees to grow it will be harder to get less oxygen and honey we get oxygen from trees and honey coming from bees which comes from flowers that is what we could help with so we could make a vegetarian meal to stop cutting meat and killing animals and animals that live in the wild and getting to hot and we

We will Have no water to drink from .So if it gets to hot then you can get sunburned if you don't put on sunscreen which will make you get to hot and be red like blood so we can help by wearing hats and by wearing sunscreen from school that we Carnot get get to hot or sweaty.If we go and wear sunscreen we won't be burnt climate Change is a important issue because I could get to warm or cold and people can't handle it, including some animals animals, and humans will die, because of how hot it is including polar bears they won't be able to live in their habitats and since they are so addicted to it it will be sad to see them leave the place so if the ice melts and the polar bears won't be able to have a baby in the snow get warmer by 1.5° In a couple of days like it's hot right now If you decide to cut trees then you Carnot have animals were they live no more and if you cut down trees then animals would die because of them leaving there habitat were they belong if you move them there will not be able to have there babies in there place.

Conclusion

Climate Change is a important issue because I could get to warm or cold and people can't handle it, including some animals animals, and humans will die, because of how hot it is including polar bears they won't be able to live in their habitats and since they are so addicted to it it will be sad to see them leave the place so if the ice melts and the polar bears won't be able to have a baby in the snow get warmer by 1.5° In a couple of days like it's hot right now If you decide to cut trees then you Carnot have animals were they live no more and if you cut down trees then animals would die because of them leaving there habitat were they belong if you move them there will not be able to have there babies in there right place.if it get's even worse then you will not be able to have not that many people to be out of the house.there will not be that many people do not go out of the house there won't be .
