

## Final assignment - Gracie Forrest

Climate Change is a serious issue because its not like a game what you can mess around with or control. Because it could cause serious injuries which means the population would go down and including the circle of life known as the food chain so if one just one animal eats to much what they are supposed have the whole food chain will go down. That's why South Bank Community Primary School should get involved.

What is climate change mean?

climate change we can't control but we can help to reduce it or slow it down by planting more tree's ,driving electric cars not eating meat using solar panels or even wind turbines and recently more. Climate change can cause serious injuries not just to people and animals but wild life like trees a homes.

What causes climate change.

Climate change has a serious effect on our investment and homes. How? So when climate change is to strong or aggressive it can destroy homes and people's lives . The most common weathers that can cause that damage is really strong earthquakes floods tornadoes hurricanes and heat-waves. That means climate change is really really dangerous because it can cause extreme damage than you can think

What is the impact of climate change?

The impact on climate change can affect greenhouse. A greenhouse is a place were you can grow crops and plants they put them in there because the plants and crops get more room to grow and they get just a enough sunlight. All the schools out there should try just try even if it's just like the tiniest bit get involved in slowing down climate change. By getting your head teacher to get more solar panels with the money (he or she) get.

Our school should get involved but how? so our school can one big meeting with all the kids even nursery kids because everyone has an idea or two. And this is what we'll do so every class and I mean every class even the all the teachers especially the teachers assistant, will come in the big hall and split into groups of 20. But we have to be in different age groups and all the nursery and reception will work together with teachers. And we'll get 4 or 6 pices of scrap paper. Then we'll write ideas about how we can help climate change to slow down our mane ones we what is getting solar panels on the roof getting most of the teachers to get electric cars have the cook to get us a vegetarian menu for every. Mondays Wednesdays and Thursdays on Fridays and Tuesdays we get a little treat of cook . We might get recycling more by getting more recycling bins so we can have 2 in each classroom even for Miss Coopers office.

Conclusion

Climate Change is a serious issue because it's not like a game what you can mess around with or control. Because it could cause serious injuries which means the population would go down and including the circle of life known as the food chain so if one just one animal eats to much what they are supposed have the whole food chain will go down. Climate change we can't control but we can help to reduce it or slow it down by planting more trees driving electric cars not eating meat using solar panels or even wind turbines and recycle more. So when climate is to strong or aggressive it can destroy homes and people lives. The most common weathers that can cause that damage is really strong earthquakes floods tornadoes hurricanes and heat - waves. Impacts on climate change can grow crops and plants they put them in there because the plants and crops get more room and they get just a enough sunlight.

Ice age

We can't have big blocks of ice melting in the ice age because the sea level will increase causing floods killing animals and humans. In the ice age the temperature changes up to 20C in places

over- about 30,000 years or even 15,000 years. An ice age period when the atmosphere cools down and there was an increase in the amount of snow and ice and in the size of glaciers.
