

Sec 1 Climate change is just the long term change in the temperature of the earth and other elements of the weather

Sec 2 There are many causes of climate change but one example is earthquakes could take many lives along with people homes We have had many tradeties that have accurd due to this rare occasions

Sec 3 There are many impacts in climate change which are mostly not good I say this because climate change is so serious that it can affect people massively by even taken their lives It has been recorded that that people's lives have been cut short The climate change can also affect a lot of animals especially animals that live I cold places like the North Pole and the South Pole because of the heat something called permafrost. Permafrost is a gas that keeps the ice from melting and because of the heat permafrost is despairing so many animals have tragectly lost there homes because of this and animals like power bears and peinguins who are use to the cold could lose their lives because being in the cold is part of their natural habitats

Sec 4 Sec 5 South bank and other schools can help a lot of people by paying money to the government so they can build a underground base where people can go Sec 5 South bank and other schools can help a lot of people by paying money to the government so that they can build a under ground base where people can go if any massive climate change happens and this can help many people even if whatever the occasion is it could damage buildings and homes but it still protects the people who decide to come to this place and if it is rain involved we can evolve by make a lot more water prove clothes that we can wear so that we don't get wet Sec 6The massive heat has affected many living things like people and animals but it has also really affected the forest especially rain forests as there have been many forest fire that have been started because of the heat and it also linkes in with the animals as animals like squirrels who lives in trees have lost their homes and have had to relocate to somewhere else all because of the heat Sec 7 The heat has almost completely changed from how it was a long time ago because there use to be many many snowy days in the olden days and most of the time school days were shut down because of how cold and snowy it was but now school days aren't even happening because of the HEAT

Sec8 There are many things we can do to help the our planet earth

We can stop eating meat because it has a lot of methane because of when they pump

We can drive electric cars because gas powered cars have methane which is bad for us and the earth

Start using soler panels because it obsorbs the heat and uses it for energy making less hot which is good for us humans along with animals and forests and fields

Start using green houses and green houses trap the gases that cause heat and as we know heat is bad for us Start using green houses and green houses trap the gases that cause heat and as we know heat is bad for us

Become vegetarians because as we know Ethan is bad for us and animals have methane when they pump and methane is a gas that's bad for us

Stop cutting down tree because trees not only give oxygen but breaths in carbon dioxide and converts it to oxygen and gives it to us but if we cut them down then all the carbon dioxide in it will escape

Sec 9 One thing we have not talked about is the temperature the temperature has changed a lot as it has not only become not only hotter but it has also caused things like forest fires and way more heat strokes which has affected many many lives and it has even taken some as some people can't handle the extreme temperatures changes in heat
